

re-moonah-ation

Fast facts:

- The Moonah (*Melaleuca lanceolata*) is a member of the paperbark family.
- They grow from 4 – 8 metres and have large creamy-white flower spikes from November to February.
 - They thrive on local soils and are very tolerant of the salty coastal air.
- They are a long-lived tree and will eventually grow very large, up to 20 metres!
 - They provide great habitat for a range of birds, insects, bats and possums.
